"OS Changer works great. I really didn't have to 'convert' any code..."

THE PROJECT:

A port of their pSOS/386-based A3 patient monitor to the MPC823, project name "A3E"

Time to Complete: 1 Week

"OS Changer works great. I really didn't have to 'convert' any code from pSOS to Nucleus. I just had to integrate OS Changer into the combination of pSOS and Nucleus tasks that we ported from two previous projects. It took about a week. I had to integrate maybe 75 KLOC, about a hundred pSOS calls."
